

Power BI Copilot Cheat Sheet

 AI Readiness & Model Optimization Cheat Sheet

Documented by: Farhan Soomro

Sr. CSA

Note: We will complete all the following steps in the Power BI Service (powerbi.com).

- Login to PowerBI.com
- Open the semantic model

Change to Editing Mode

Save to Version History

- Before modifying the model let's save it first using Save to Version history

Save your changes to version history?

Saving this version could overwrite a previous version in version history, which can hold up to 5 versions, including autosaves.

What can Copilot do?

Suggest improvements

Recommend better names for tables, columns and DAX measures|

Copilot uses AI. Always review content for mistakes. [Read terms](#)

Click **Allow** to let Copilot apply the changes.

After Copilot finishes:

Prompt: Apply all the changes and also update DAX measures, calculated tables and calculated column with new names

Note: Copilot changes may break existing DAX measures or reports. Create a dedicated copy of the semantic model before applying changes.

Data Model Improvements

Prompt: Improve table relationships

After Copilot finishes, Apply all the suggested changes.

Column Review

Prompt: Review column properties

After Copilot finishes, Apply all the suggested changes.

Prep Data for AI

Prompt: Review my model and generate a text for Prep data for AI instruction use business friendly terms. Be explicit and specific and use analogies and descriptive language, avoid ambiguity.

Note: After Copilot finishes, copy the generated text and paste it into **Prep Data for AI**.

Close

Move to **DAX query view** now

Suggest Measures

The screenshot shows the top of the Power BI interface. At the top are 'Home' and 'Help' tabs. Below them is a toolbar with icons for clipboard, Format, Comment, Uncomment, Find, and a Copilot icon. A message states: 'DAX queries are discarded on close. DAX queries previously saved to the mo'. Below this is a 'Run' button and an 'Update model with changes (0)' button. A Copilot prompt '1 Select the icon or press Ctrl + I to use Copilot' is shown. Below the prompt is a text input field with the placeholder 'Ask Copilot to write or edit a DAX query or ask a related question'. Three buttons are visible: 'Suggest measures' (highlighted with a red arrow), 'Explain a DAX topic', and 'Write a DAX query'. At the bottom of the panel, it says 'Copilot uses AI. Always review content for mistakes. [Read terms](#)'.

Results

The screenshot shows the bottom of the Power BI interface with the view selector. It includes a 'Query 1' tab, a green '+' button, and three view options: 'Model view' (with a cube icon), 'DAX query view' (with a DAX icon and highlighted by a red arrow), and 'TMDL View (Preview)' (with a TMDL icon).

Click **Keep query**

 Based on my data suggest new measures in a DAX query for further analysis and try them out with one or more suitable columns 124/2000 

Retry

Keep query

Discard query

Copilot uses AI. Always review content for mistakes. [Read terms](#)   ...

Next step is **Run** it and after reviewing them, click on **Update model with changes**

 DAX queries will be saved to your model They w

 Run

 Update model with changes

Stay in Dax View and try

Prompt: Create a measure for each numeric column where SummarizeBy is not 'none' and use the appropriate DAX aggregation function

 Run

 Update model with changes (0)

1  Select the icon or press Ctrl + I to use Copilot

 Create a measure for each numeric column where SummarizeBy is not 'none' and use the appropriate DAX aggregation function 121/2000 

Copilot uses AI. Always review content for mistakes. [Read terms](#)   ...

Click **Keep query**

 Based on my data suggest new measures in a DAX query for further analysis and try them out with one or more suitable columns 124/2000 

Retry

Keep query

Discard query

Copilot uses AI. Always review content for mistakes. [Read terms](#)   

Next step is **Run** it and after reviewing them, click on **Update model with changes**

 DAX queries will be saved to your model They w

 Run

 Update model with changes

Now Move to Model view

Measure Descriptions

Prompt: Help me add or replace descriptions with each measure.

- Consider the following rules:
 - insert or replace the description that should appear above the measure code and after ///
 - use business friendly terms
 - Describe the DAX code in the description in business-friendly terms. Do not copy the code to the description
 - use the name and other measures as context
 - description should not be longer than 500 characters

Note: After Copilot finishes, Apply all the suggested changes.

Optional

Prompt: Review my model and create Star Schema

Review Copilot's Star Schema Recommendations

Copilot may recommend creating new tables while restructuring the model into a star schema. Before applying any changes:

- Review each proposed table and relationship.
- Confirm that the changes align with the model's business requirements.
- Assess the potential impact on existing measures, reports, and downstream dependencies.

Next Steps with Power BI Copilot

The data model is now optimized for Power BI Copilot. You can use Copilot to:

- Create new report pages.
- Ask questions about your data and receive relevant insights.
